

The purpose of the course is to provide a basic knowledge of drilling and drilling methods, as well as to highlight aspects of drilling that have a major impact on production efficiency and thus financial results.

Our experience is that the course usually entails an Aha experience for both experienced and completely inexperienced participants.

The course is turns to drillers/workers and management and designers within foundations. The groups can be both mixed and purified from a professional category, according to wishes.

Ideal group size is 5-12 participants per occasion.

A course usually runs between 9 and 14:30 for one day. The course mixes lectures with exchange of experiences during group discussions.

It is possible to tailor the education based on your experience and needs, and group composition.

Content:

Drilling and drilling methods

Maintenance, care and operation – DTH drilling

Product knowledge

Maintenance, care and operation - Top hammer drilling
